Amazon WorkMail

Organizations

Create organization

Create an Amazon WorkMail organization to provide email addresses to groups of users in your company. The email addresses include the domains that you select for your organization.

Organization settings

Email domain

Select the domain to use for email addresses in your organization.

Existing Route 53 domain

Select a domain name that you manage with a Route 53 hosted zone.

New Route 53 domain

Register a new Route 53 domain name to use with Amazon WorkMail.

External domain

Enter a domain name that you manage with an external DNS provider.

Free test domain

Use a free testing domain provided by Amazon WorkMail. You can add a domain later.

Alias

Enter the alias to use for your organization.

aryankr

Your alias can have up to 45 characters. Aliases can only include lowercase letters (a-z), numbers (0-9), and dashes (-). This determines the login URL for the web application: aryankr.awsapps.com/mail

Step 4: Go to the organization which we have created and click on the Amazon WorkMail web application.

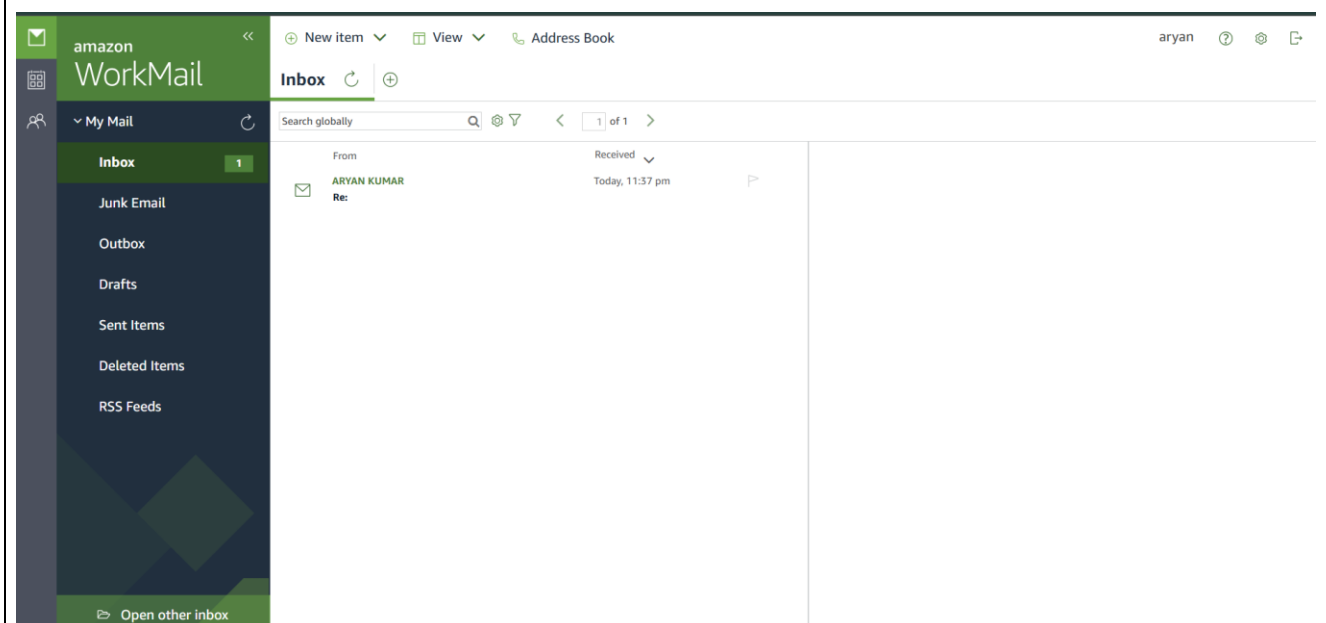

Step 5: Fill the username and password and Sign in.

Step 6: New item > New email : Send a message to my own Gmail from Amazon WorkMail.

Step 7: Again if I send the mail from my own Gmail then this is what we received in Amazon WorkMail.

We've successfully created a WorkMail for our Organization.
